25/25

* ?AES is which type of encryption ✓

Symmetric ☒

Assymetric ☐

Hashing ☐

0/25* **Decrypt an AES ciphertext in CyberChef**

Ciphertext (Hex): 22403ff71d31d9963199c405593f156c

Key (UTF8, AES-128): CyberChefKey1234

IV (Hex, CBC mode): 00000000000000000000000000000000

Steps:

Open CyberChef (gchq.github.io/CyberChef).

In the **Input** box, paste: 22403ff71d31d9963199c405593f156c

Search for AES Decrypt and drag it into the **Recipe** panel.

Set the recipe fields: Key: CyberChefKey1234, format = UTF8 IV: 00000000000000000000000000000000, format = Hex Mode: CBC

Input: Hex Output: Raw Bake.

Provide the output (decrypted text) as short answer below.

Hello World

الإجابة الصحيحة

Now you see me

25/25* Hash a string with SHA2-256 in CyberChef

Input: Never store passwords in plaintext.

Steps:

Open CyberChef (gchq.github.io/CyberChef).

In the **Input** box, type: Never store passwords in plaintext. (include the trailing period).

Search for SHA2 and drag it into the **Recipe** panel.

Set the recipe fields: Size: 256 Rounds: 64 (default – leave as is)

Bake.

Common mistake: an extra trailing space or missing period changes the entire output and that's the point of hashing.

What is the correct hash output?
